DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on October 24, 2006 has been entered.

Response to Amendment

2. Applicants have amended independent claim 1 to now recite that the particles of a refractory compound are embedded only within the yarn fibers of the inner fabric layer; and further to recite “*and substantial portion of the particles of the refractory compound are spaced from the surface of the skin, due to the raising process, to cause body heat reflected by the particles to travel through the trapped air space of the raised surface region for insulated warming of the wearer's skin.*” Applicants indicate that support for the amendments is found implicitly throughout Applicant's specification. The Examiner has reviewed the Specification and finds that the “embedded only within the yarn fibers of the inner fabric layer” is supported by the Specification for example, in Page 3, lines 18-22.

Allowable Subject Matter

3. Claims 1-8 and 10-18 are allowed.

The following is an examiner's statement of reasons for allowance: while the prior art of TOSHIO does teach wearing the hair tips with the inorganic particles of the pile yarns placing

the hair tip toward the side opposite to the human body such that the human body is effectively kept warm, the claims as amended preclude the inclusion of such refractory in the yarns of the outer layer of the present invention. It is noted that while the combination of LUMB in view of the teachings of FUJIWARA and TOSHIO et al. would have led to located refractory particles in either layer of the fabric of LUMB, especially in the raised (inner) layer; the Examiner finds no motivation to limit the inclusion of the refractory particles to only the inner layer of the composite.

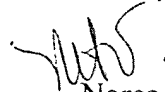

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
